

Artwork Services

We can work with any type of file or drawing that you have

You send us a sketch

We create a production ready file

We can show you a virtual proof

You send us a website file

We create a production ready file

We can show you a virtual proof

Common Questions:

Can we work from a website file? *Yes. They are often quite small, the bigger the better.*

Can we design something from scratch? *Yes – almost anything you want can be done.*

Do I need to find an artist myself? *No – we have our own artists who can take care of everything.*

If you have an official logo that you have used for business cards or letterhead, that would be very useful to send along. It is known as a 'vector file' and would have a file name that ends with something like '.EPS'; '.AI'. Don't worry though, send us whatever you have, and we can make it work.

Technical Details if you already have your own artist (if not, skip this part):

Black and white vector format; RGB; all text outlined (converted to curves); black is raised metal (at least .75 pt. at 100%); white is recessed (at least 1 pt. at 100%); All text under 12 pt must be bold sans serif font at 100%; Text under 5 pt will not reproduce properly using the spin cast process; Everything to be color filled (white areas) should be outlined with solid black lines (walled off).
