Artwork Services

We can work with any type of file or drawing that you have

You send us a sketch

We create a production ready file

We can show you a virtual proof

You send us a website file

We create a production ready file

We can show you a virtual proof

Common Questions:

Can we work from a website file? *Yes. They are often quite small, the bigger the better.*

Can we design something from scratch? *Yes – almost anything you want can be done.*

Do I need to find an artist myself? *No – we have our own artists who can take care of everything.*

Handy Hint

If you have an official logo that you have used for business cards or letterhead, that would be very useful to send along. It is known as a 'vector file' and would have a file name that ends with something like '.EPS', '.AI'. Don't worry though, send us whatever you have, and we can make it work.

Technical Details if you already have your own artist (if not, skip this part):
Black and white vector format; RGB; all text outlined (converted to curves); black is raised metal (at least .75 pt. at 100%); white is recessed (at least 1 pt. at 100%); All text under 12 pt must be bold sans serif font at 100%; Text under 5 pt will not reproduce properly using the spin cast process; Everything to be color filled (white areas) should be outlined with solid black lines (walled off).
